Mamra almonds are a type of sweet almond with a thinner shell compared to other almond types. Considering that the kernel percentage of Mamra almonds is about 48% and the percentage of twin kernels is over 36%, it can be said that they are economically significant as they have a large market in the nuts and confectionery industries and can be easily used to make diverse and delicious products. This type of almond is used in the food industry as powder and slices or in nuts in raw and salted forms. Additionally, due to its fat content, Mamra almond is used in the production of various cosmetics and soap. Mamra almonds are usually offered in various packaging types, including glass, zip-lock, and plastic bags. The best method for selecting suitable packaging is to consider your needs and specific use to enjoy the special properties, taste, and high quality of Mamra almonds.

Paper shell almond, also known as 'Monagha,' is part of the incredible variety of almonds, with a thin outer shell that is easily breakable and a kernel size much larger relative to the shell. This makes it very suitable for daily use and mixing with other nuts.

Paper shell almonds are mostly produced from natural

orchards without chemicals and are offered in various export-quality packaging while adhering to international standards and qualities.
